Medgraph Announces New Corporate Website with Preventive Care Kit Offerings

Rochester, NY June 8, 2007 -- Medgraph, Inc. is pleased to announce the implementation of a new corporate website www.med-graph.com. The new site has improved corporate information, navigation and a product section for sale of preventive care kits. The site will also house Medgraph's new GMS (Glucose Monitoring System), which is currently undergoing clinical trials.

The new web site is the platform for a focused effort to improve patient monitoring via home-based facilities and will become the key for automated communications from medical devices. Medgraph's ongoing research efforts continue to be at the forefront of medical communications technology in assisting in efficient monitoring for the disabled and elderly, while improving medical care at reduced costs.

Medgraph's president and CEO, Ed Schlueter, said he was extremely pleased with the new website and appreciated the efforts of Enterprise Design and many other people behind the scenes who aided in developing and launching the new corporate web site.

Medgraph is very active in the Rochester area with the Lennox Center, The Entrepreneur Network forums, Rochester Business Alliance, US Government Procurement Technical Assistance Center, Greater Rochester Enterprise and other community organizations who all support the economic development efforts to maintain high technology resources in upstate New York. Medgraph has a series of interacting partners in Rochester and Buffalo that include the University of Rochester, University of Buffalo (RERC), AZtech and Esensors and the Diabetes Endocrinology Center of Western New York.

Medgraph, Inc. is a medical informatics company providing technology and infrastructure to manufacturers of home-based healthcare monitoring devices and medical research facilities.
